

Rapid Release

The Rapid Release is deployed in one motion, simply pull up on the handle of the clamp and the drain sleeve is deployed. This mechanism was designed so that it does not add additional height or width to the tank when open or closed.

- Available on new aluminum frame tanks
- Can be retro fit to aluminum frame tanks already in the field
- Easy operation, sleeve clamps/unclamps in seconds
- Eliminates need to tie drain sleeves in place
- Does not change the profile of the tank when folded/collapsed
- Call or email for additional details
- Visit and subscribe to our YouTube channel to watch the video of our Rapid Release in action

Rapid Release

Retrofit Order Information

To order a retrofit Rapid Release mechanism, please answer these 4 questions, sign, and return:

1. Is the frame 1-inch square(1)? **Y or N**
2. Is there a gusset(2) in the corner of the frame where the Rapid Release is going to be placed? **Y or N**
3. The clamp is placed on the opposite side of the gusset(2); Is the **gusset(2)** on the left or right side? **L or R**
4. What is the distance(3) between (inside) the two uprights where the Rapid Release is going to be placed?

Distance = _____ inches

Signature _____
