LOW-FLOW™ STRAINERS

- Professionally designed and engineered for maximum pumping capacity
- Almag castings – proven to be the toughest in the industry
- The Low-Flow™ Low-Level will perform at maximum pumping capacity down to a water level of 1.5"-2" depending on your setup area
- Flow Rate – Tested with 6" Low-Flow™
- Low-Level rate is 1500-2000 GPM. The flow rates may vary due to the design of the pumper and the setup area of your pumper and FOL-DA-TANK
- Use of a male and female SST flange mounted on the side wall of your FOL-DA-TANK will eliminate the lifting factor when pumping from the side of the tank
- Surface turbulence will not affect this strainer
- Standard 1.5" water transfer device in sizes 4"-6"
- Each unit is fully guaranteed
- The Low-Flow™ Low-Level is easily stored in truck compartments and can be reattached to hard suction hose (NFPA 1142 compliant)

FLOAT DOCK® STRAINERS

The Float Dock® Strainer is a valuable piece of equipment that can save the day in many firefighting situations. Float Dock® lets you use the water in farm ponds or streams, both shallow and deep, and with a FOL-DA-TANK. Because it operates below scum and debris and above sand and muck, it screens out the materials that wear out impellers, packing and bearings. Since Float Dock® strainers are self-leveling, there are no whirlpools or suction loss. Each unit is fully guaranteed. (NFPA 1142 compliant)
